Thread: [MY RAT WONT WORK](#)

almond - May 3, 2020, 10:46 pm

after many different rat softwares, guides and videos still it doesnt work,
ive followed all portforwarding rules yet without a vpn it timesout on canyouseeme, when someone opens my file unless in my lan network i dont recieve a connection,
can anyone help me?

TheContradictor - May 5, 2020, 2:20 am

I had a similar problem with a rat. I don't know which rat you're using but maybe you should try a new rat. QuasarRat or DarkComet Rat. Tutorials for both are available on youtube. If it's an android rat, try AhMyth rat. All of them worked for me. Even though they aren't too advanced, they still give the user a good deal of contol over the exploited user.

thankyou for the advice <33

for now im just using a vpn hehe

piet - May 5, 2020, 4:55 am

did you try using something like portmap

almond - May 5, 2020, 5:06 am

Please don't use DarkComet.. 99% of the Executables are backdoored. Get a paid RAT if you're gonna get down that path

what about revenge and darktrack??
can you recommend a paid one for me?
