Thread: [\[RELEASE\] \[SOURCE\] \[FREE\] ShelNet - ShellShock BotNet WINDOWS](#)

Zaprexx - May 7, 2020, 5:22 pm

I have been working on ShellNet for a couple months on and off, ShellNet automates finding vulnerable web servers and exploits vulnerable servers to be your slaves. You can use all your slaves for a DDoS attack and much more. You own all the slaves. You can execute your own bash commands to all the slaves and so much more.

This program was my own idea and I have not seen any other program that does the same thing yet is free and open source.

I made this program from scratch and is based upon the ShellShock Bash exploit.
This is coded in vb.net.

KNOWN BUGS:

some non vulnerable websites show as vulnerable

To Do list:

Add custom page search

Add Nuke mode

Add custom search engine options

Fix Bugs

Fix all commander modules and code them

YES I KNOW CODING IS VERY MESSY, I WAS NEVER PLANNING TO RELEASE THIS TO THE PUBLIC BECAUSE OF SOME ERRORS I HAVENT FIXED. IM LAZY.

I hope as a community we can make ShellNet bigger and stronger.

ShellNet github: github.com/Zapre/ShellNet
