Thread: [Hacking My Hotels Public Network To Get Free Wifi](#)

**firsttimehacker23444** - May 8, 2020, 8:06 am

Hi,

I am looking for help hacking into my hotels public network to get free wifi.

They give you a one time login details when you check in and it expires after a period of time.

I am using a Chromebook running Debian GNU/Linux 9 (stretch)

I have tried changing my mac address to something random but this doesnt work. Also tried running the login through a private window. Would it help if i spoofed my mac address to be someone else using the wifi?

Any idea on how i can generate a new one time login or any idea how i can bypass this whole system?

thanks
