Faceit Serverside, not client.

GLWS. Seems promising but there's literally only 2/3 features. You planning on adding more?

Thanks!

We have added a toggleable radar since the thread design was made.

We don't want to add too many features that could get people banned from manual review.

From previous experience people start going too blatant, get manually banned and then they blame us.

We want to minimize that chance for that to happen.

AKROS anticheat support? - <https://akros.ac/>

Wasn't this the cheat bypassing faceit client? ;o

Thanks.

Thanks.We don't support akros, and we will most likely not do so in the future either.

We used to bypass faceit client, but upkeeping a public cheat for faceit is too much work and short lived.

Easy! That counts me out then, best of luck with sales.

Only real anticheats I have here in my region is akros and faceit, so best of luck.

You guys are definitely doing alot for the community and no doubt you'll have much success!

FaceIT serverside, the client used to be supported but isn't any longer because how tedious it is.

Esportal is supported. You can see what Umbra supports @ <https://umbrasoftware.net/status/>
