BlackUpload PHP Library
PHP Library to help you build your own file-sharing website.

It comes with more than 20 features and you can set up it in less than 5 minutes using pre-made examples.

The class has more than 5 protection levels to make your life better and your server secure.

You can use it as an API for your website or add a database wrapper to it and create a whole file sharing service.

Developed using PHP and comes with 3 main examples to show you how this PHP class works
Real-Life Example with all filters and security levels enabled

Simple Test Example with multiple file upload enabled to show you how it works

Simple API without Auth with all filters enabled to show you how to use it as a service

Features

Love this. Very simple but good enough to start with and build up with whatever project you're doing. I'm big on snippets as a guide and not 100% always re-doing what's already out there.
