Thread: [Crypter For | NJ, Quasar, Revenger Softwares](#)

**PhishTom** - May 13, 2020, 9:08 pm

Hi Guys

Please I want to purchase a rat software (Nj Or Quasar .. Or Webmonitor) But first, I want to know where can I purchase any Crypter For Those rat Softwares

Anyone can help me ??

You'll need a native crypter for those and you happen to be in the right section.

Try clicking on the stickies...

[Cryptography, Encryption, and Decryption](#)

I dont know why UBER have that "native" word when it comes to crypter.

njRat Coded in framework 2.0

Quasar Rat Coded in Framework 4.0

Both of them are managed Rat and the best option for them is a Managed Crypter

Webmonitor is a native rat and it can be crypted with both, Native as well as Managed rat.

As 2 out of 3 rats are Managed rats, Why not go with managed Crypter?

Thanks for your reply

So I can use Bytencrypter For Webmonitors Without any problem

Native crypters outperform managed crypters in every way, when properly coded. That is why he should go with a strong, native crypter.

I actually thought njrat and quasar were native rats, haven't used them in years.

That's why I said native were the way to go, my bad lol
