Thread: [Counter-Strike Global Offensive - Coding Service](#)

mov3axs - May 19, 2020, 8:42 am

Hello, I'm offering coding services for Counter-Strike Global Offensive for a reasonable price. I'm experienced with Counter-Strike Global Offensive in particular. I have worked with some pretty known developers in the scene and proof can be given.

List of features I support note you can request more features when discussing with me these are just an example of the things I can do -

Internal / External Cheats

Legit Features (Humanised, Smoothness, Field of View, Advanced Hitscan, Target Types, Backtracking)

Rage Features (Backtracking, Autowall, Aimbot, Anti-Aims, Lag Compensation, Animation Syncing, Multipoint)

Visual Features (Chams, Health, Ammo, Weapon, Friend ESP, Sonar)

Other Custom Features

How does this work?

So once you have contacted me and we've discussed features dependent on your reputation I would ask for 50% of the purchase up front and the other half once completed. All my code is unique and is not re-used. I am willing to show my screen or remotely code via Teamviewer on your computer so you can see what I am doing however you will need a few tools

Contact Info

You can contact me via the following

Discord - Coat#6741

Payment Methods -BTC

Others can be discussed
