Thread: [\[SOURCE CODE\] \[VB.NET\] Destroyer Protection](#)

fisica638 - May 19, 2020, 5:25 pm

Well, first of all hello, Destroyer Protection It consists of several libraries with many functions and Anti - Analysis features.

Based on a C ++ Project called al-khaser

Well the Project itself consists of 2 modes:

Check Mode: It does a quick Verification and returns the results.

Monitor Mode: It is an Asynchronous Scanner, which will only produce results when it detects something malicious. in this mode, it is the one that your .Net Application would normally carry.

Introduction

Several classes that give you Protection for your .NET Application.

Possible usesYou are making an anti-debug plugin and you want to check its effectiveness.

You want to ensure that your sandbox solution is hidden enough.

Or you want to make sure your application has at least a minimum of Protection.

It also has functions which you can adapt to your packer.

Features

Anti-debugging attacks

Anti-Dumping

Anti-Virtualization / Full-System Emulation

Anti-Analysis

Additional features
