Thread: [Custom trading Script - Dogeflipper](#)

Voxcon - May 22, 2020, 11:25 am

Welcome to the official Dogeflipper thread!

Hi,

I am Vox and, in this thread, I'm offering access to the custom cross-platform crypto currency trading script for the binance market which I have been working on over the last couple of months. The script can be run on Windows, Mac, Linux, Android and Unix based system.

Well, now you might ask: "Ok cool, but why should I even bother? Did you even make any profit with it or is this just another scam?" and these are perfectly valid questions.

To keep the answer short:

Please have a look at the threads I have linked below. In those I've documented the development process of the script as well as the profits which I have made since March 25th. I have not only provided plenty of screenshots in the threads, but I have also uploaded a video in which you can see me logging into four different binance accounts and showing my profits as well as restarting the script on one of them. As of writing this I have made about 0.11 BTC or close to \$1050 with the script since the end of March.

Link to the initial thread about the script:

Now you are probably wondering "How does this Dogeflipper-thing / script work?" and that's another completely legitimate question.

Therefore, let me try to explain it as simply as I can.

The basic trading strategy the Dogeflipper script follows is a continuous alternating flipping strategy, which means that the script will continuously perform a loop of either: Placing a low buy order,

waiting for it to fill. Then placing a higher sell order and waiting for it to fill as well. Then rinse and repeat.

Or, placing a high sell order, waiting for it to fill. Then placing a lower buy order and waiting for it to fill as well. Then rinse and repeat.

Following this simple strategy will ensure that the script does not perform any negative / unprofitable trades at all. Furthermore, it allows you to “play” the market even though you don’t have to constantly monitor the market movements.

Whether the script starts with a buy or sell order depends on the settings you specify within the configuration file of the script. Within that file you can also define important things like the market you want to trade on (all binance markets, except future markets are supported), the prices at which the script should place buy and sell orders, how large the price difference between those orders should be, at what frequency the script should check whether your latest order has been filled yet or not and many more.

Here is a short list of the features of the Script: Allows you to automatically trade on binance following a simple alternating flipping strategy

Comprehensive setup capabilities for markets, prices and time frames

Local logging, meaning that the script can log all its actions locally

Email notifications, enabling this option will allow the script to send email notifications about its recent actions to your email e.g. if an order gets filled and a new one is being placed.

I also do intend to add more features in the future, e.g. new trading strategies or new exchanges.

Now you might again ask: “Ok cool, sounds nice, but where is the catch? This thing is probably going to cost a shit ton of money isn’t it?”

Well, not really. It is true that I’ve spent countless hours developing and optimising this script and therefore I’m not going to offer it for free. But I do not want smaller investors to be also able to use the script to make a profit. Therefore, I’m offering access to the script at the following prices:

1-week = \$2.50

1-month = \$8

3-month = \$21

6-month = \$39

12-month = \$72

Support, updates and a comprehensive user manual of 6 pages is included with all versions!

Before opening a contract feel free to contact me via PM or Discord (Voxcon#1610)

Best regards,

Frequently Asked Questions:

Spoiler ([Click to View](#)) Do I have to run the script 24/7? No, you absolutely do not have to do that if you don't want to. Within the configuration file there is an option to start the script in "CONTINUE"-mode. You can choose this option if you want the script to resume where it left off.

What's the benefit of running the script 24/7 then? If you run the script 24/7 the script is more likely to quickly detect when your orders have been filled and will therefore be able to place new orders more frequently. And more orders are pretty much equal to greater gains.

Can I run the script on windows 7? Yes, the script can be run on windows 7, but you might need to install a specific windows update in order for it to work. If you have trouble with this, let me know via PM.

Is there a refund policy if I'm not happy with my purchase? No there is not but contact me and we should be able to work something out together.

TOS:

Spoiler ([Click to View](#)) I'm not going first unless I deem you trusted and we have dealt before.

I have the right to refuse to trade with anybody.

I have the right to change the TOS at any time without further notice.

Sales trashing will result in a ban from the script and a deal dispute.

All sales are final. No refunds.

By completing the contract you agree to these terms of service.

???????????Michael Kors - May 22, 2020, 11:30 am

How much do I need to invest to start making money?

Internet Bully - May 22, 2020, 11:39 am

(May 22, 2020 11:30 AM)???????????Michael Kors Wrote: [CITE](#) How much do I need to invest to start making money?

Was just about to ask how much doge needs to be purchased in order to make money past the \$10 invested in the script already? Sounds like a nice idea tho

Voxcon - May 22, 2020, 11:58 am

(May 22, 2020 11:30 AM)?????????Michael Kors Wrote: [\[CITE\]](#) How much do I need to invest to start making money?

Well, that's a bit difficult to say. It largely depends on the market you choose to trade on. I've mainly focused on the slow paced DOGE / BTC market for now. In the time between march 25th and today, I've made a profit of a little over 0.11 BTC, so roughly %11 over the course of 2 month. If you want to focus on the DOGE / BTC market as well, we could, for simplicity, assume that you will make a %5 return per month (probably a bit higher). So in order to break even / make \$10 per month, you would have to start with an investment of roughly \$200 ($200 \times 0.05 = 10$).

(May 22, 2020 11:39 AM)Internet Bully Wrote: [\[CITE\]](#) Was just about to ask how much doge needs to be purchased in order to make money past the \$10 invested in the script already? Sounds like a nice idea tho

As i've mentioned in the answer above. The DOGE / BTC market is kinda slow paced, so you would have to calculate with about \$200 in order to break even.

Best regards,
Vox

Internet Bully - May 22, 2020, 12:25 pm

How much did you put into it to make that much in a couple months?

Voxcon - May 22, 2020, 12:35 pm

(May 22, 2020 12:25 PM)Internet Bully Wrote: [\[CITE\]](#) How much did you put into it to make that much in a couple months?

I have been running the script on four different accounts (each with an initial investment of 0.25 BTC) since march 25th.

What's the reason for 4 different accounts?

Voxcon - May 22, 2020, 12:43 pm

(May 22, 2020 12:37 PM)Internet Bully Wrote: [\[CITE\]](#) What's the reason for 4 different accounts?

If you would run multiple instances of the script on the same account and the same market but on different market conditions, the instances would interfere with each other.

Thus it's simpler to work with multiple accounts. In binance you can ad so called "sub-accounts" to you main account, which helps with KYC stuff which makes things a lot easier.

Best regards,
Vox

Internet Bully - May 22, 2020, 2:05 pm

Are the doge prices it sells and buys at set in the script? Or would I set them

Voxcon - May 22, 2020, 2:53 pm

(May 22, 2020 02:05 PM)Internet Bully Wrote: [\[CITE\]](#) Are the doge prices it sells and buys at set in the script? Or would I set them

You can specify the market as well as the price ranges you want the script to operate on within the configuration file.

Best regards,
Vox

Internet Bully - May 22, 2020, 4:47 pm

I sent you a chat, reply when you can

Sorry for the delay. Had to take some sleep, but i've sent you a PM.

Best regards,
Vox

Voxcon - May 26, 2020, 3:03 am

Price Update:

A few people contacted me and said that they would like to use my script but couldn't afford to trade with +\$200 bucks in order to break even. Therefore i've lowered the subscription fees a bit.

The new prices are as follows:1-month = \$8

3-month = \$21

6-month = \$39

12-month = \$72

Best regards,
Vox

Trite - May 26, 2020, 3:06 am

Interested in this, but unable to use Binance. When you add other exchanges I'll happily get a subscription.

Tor - May 26, 2020, 3:06 am

Looks, good man. Keep up the good work.GLWS!

etherunit - May 26, 2020, 6:55 am

Good job! Very interested in your tool. You put many effort to it..

I'm pretty new to crypto. Sorry for my noob question.

But how does script behaves if, for example:

- There is active buy order executed, let's say with ETH/USD pair (as an example), at 200usd. I bought 5 ETH and invested +-1k USD in total Ok, price goes down and Im suffering losses. With script I'll have same loss until some point.

- OK, I create another order at expecting price goes down further, but it goes up next morning. How I can protect myself from such situations by use of this script???

Thank you.

Can you please let me know which discord server you are in?

I'm not exactly sure if i do understand what you are trying to ask me, therefore let me try to rephrase your questions:

1. Let's assume i'm trading on the ETH / USDT trading pair and i have bought 5 ETH for a total of \$1k (\$200 for each). Now what will the script do if the market goes down significantly? And will i suffer the same losses when using the script in comparison to not using the script?

Answer: If the script performed the buy order at \$200 per ETH and the prices goes further down, the script will do nothing until the prices go back up and hit your sell order. Only after the sell order is hit the script will place another buy order at \$200. If the prices will keep going down and your sell order will never be filled, the script will do nothing and you will end up holding your ETH in a so called bag.

2. What happens if the script buys at a low price and the prices go up over night? After the initial buy order is filled, the script will instantly post a new sell order at the defined price from the config file. If the prices go up enough and the sell criteria are met, the sell order will fill and the script will automatically place a lower buy order again. So if the prices go down and then up and then down again, you will end up earning money buy using the script. That's the whole point of using it. Automatically place orders to profit from market swings.

I hope i was able to answer your questions, but if not let me know via discord (Voxconx1610) and i'll help you there.

Best regards,
Vox

eSp0rt - May 27, 2020, 12:38 am

Interesting, i'll add you on discord for more informations.

etherunit - May 28, 2020, 2:18 am

And what is discord server name where I can find you?

Voxcon - May 28, 2020, 2:59 am

(May 28, 2020 02:18 AM)etherunit Wrote: [\[CITE\]](#) And what is discord server name where I can find you?

My Discord tag is: Voxcon#1610

Best regards,
Vox

PS: I've updated the subscription offerings again. You can now get a one week trail for \$3.5.

9tiraprimo - May 29, 2020, 3:08 pm

Bought the script from Vox , very good support and very good reliability , i'll post profits later !

Comzey - May 29, 2020, 8:59 pm

Posting here now so i can come back later might grab this soon...

T0Bi - June 7, 2020, 2:40 pm

Nice profits!

Have you ever backtested your script and if yes, how did it perform in a bear market?

Voxcon - June 8, 2020, 9:45 am

(Jun 7, 2020 02:40 PM)T0Bi Wrote: [\[CITE\]](#) Nice profits!

Have you ever backtested your script and if yes, how did it perform in a bear market?

Well, in theory you could backtest the script and for some markets (probably the high volatility high volume markets) it could make sense, but for the DOGE / BTC market which i'm mainly trading on it doesn't really make sense (to low volume to low volatility), especially when you considere that the script uses limit orders instead of market orders. Therefore with backtesting you would probably get unrealistic results indicating more trades than what the script would be able to achive in reality. In general, i prefere testing on real markets.

Best regards,
Vox

Voxcon - June 10, 2020, 12:17 pm

Small update: The price for a one week trail subscription has been lowered form \$3.50 to \$2.50. So if you want to test the script feel free to send me a PM or to contact me on Discord (Voxcon'1610).

Best regards,
Vox

Voxcon - June 24, 2020, 12:44 pm

Small update: due to some personal things that require my attention until the end of september i won't be able to push large updates like implementing new strategies or features to dogeflipper for now. However, i will still be here to provide you any support you might need in the mean time.

Best regards,
Vox

Voxcon - July 31, 2020, 12:26 am

Now accepting bytes as a payment option as well.

Best regards,
Vox

Voxcon - August 15, 2020, 2:04 am

One week trails are on sale for now.

Grab your one week trail for only 1.50\$.

Best regards,
Vox

sonic_fire - August 15, 2020, 4:25 am

I tried this for a week and it's working just fine, doing what is suppose to do.

The OP and super friendly and very knowledgeable in his field.

He forgot to mention that his script can be use with any coin pair as long as it is listed on Binance, not only BTC/DOGE, which is a big plus, at least for me.

Another plus is that you can buy shorter subscription and try it out if it working for you or not. Also, the renting is quite cheap, compared with other services sold here, on HF.

In conclusion, I highly recommend the OP and his script.

Voxcon - December 2, 2020, 2:39 am

Still offering this service.

Best regards,
Vox

Trite - December 2, 2020, 6:47 am

Might grab this later in the afternoon today if you're on.

Lextian - December 3, 2020, 3:03 am

This is a very interesting project, will be back to give this a try soon.
