Thread: [Change IP Address Every 5 Seconds High Security](#)

OxaByte - May 23, 2020, 10:24 am

Code git clone <https://github.com/ruped24/toripables2>.gitCode git clone https://github.com/ruped24/tor_ip_switcher.gitCode apt-get install tor = tor downloadsservice tor start = start tor

service tor stop = stop tor

service tor status = check it

leafpad /etc/tor/torrc we are entering

We delete the # sign in the lines starting with the control port and hash

tor --hash-password = we set password

We write leafpad/etc/tor/torrc and record the number given to the hashed part.

Code cd toripables2Code python toripables2.py -l = toripables2 startCode cd tor_ip_switcherCode python tor_ip_switcher = toripswitcher startwe enter the password we set

Set the IP address duration and the ip address changes every 5 seconds

adi666 - May 24, 2020, 3:42 am

great! i like that! nice job!

Tor - May 26, 2020, 3:12 am

Cool script you made there. Keep up with the good work this was useful.

dags1968 - May 26, 2020, 7:03 am

Need to run the termux in background?

GottaGoFast - May 29, 2020, 12:00 pm

Going to try this out later

4Txe4y33C9zvNhMj - May 29, 2020, 1:49 pm

How's that supposed to protect you?

Makes you use different IPs, anyone with more brain cells than the average leech on here can still find out which ones you are, just based off sessions etc.

No point in using this.

The Continental - May 29, 2020, 1:58 pm

Nice share, but nowadays you have a lot more things to worry about that'll trace you than just ip address.

Connecting to a different tor proxy every 5 seconds seems a bit phishy
