Thread: [How do I stay anonymous while hacking? \(Is QubeOS good for it?\)](#)

bigman429 - May 24, 2020, 12:41 pm

I want to stay anonymous while hacking and QubeOS looks like a good tool to help. Is QubeOS good for ethical hacking or should I use Kali Linux? If so, how do I stay anonymous on it?

SIM-4725719 - May 24, 2020, 4:07 pm

Use a virtual machine firstly on vmware

And if you are doing ethical hacking no issue with anonymity.

Kali is debian based so look for other debian based hacking distros.

On Kali is Anonsurf alone enough to do blackhat hacking without getting caught, or would [censored] + Anonsurf + Proxy chains do it?

^ haha..

What are you attempting to do OP? Obviously it will be for education purposes lol

TheContradictor - May 25, 2020, 9:32 pm

QubeOS is good, but i personally prefer tails for anonymous surfing. But be warned, even if you use proxychains/anonsurf, please remember that your MAC address can still be tracked by a person skilled enough. You need to know about masking your DNS, as well as changing your MAC address to be anonymous. Please do a bit more research before assuming that you're completely anonymous using only anonsurf. Anonym8 is a slightly better option but do learn the basics before moving ahead
