Thread: [Native Screen Locker with Blur Effect | By Arsium](#)

arsium - May 25, 2020, 5:40 am

Hello everyone just wanna share my personal code with native api about screenlocker. This screenlocker can't be closing without rebooting.

Features :

- Blur Effect (and yes in winforms)
- LowLevel Keyboard Hooking avoiding to create new desktop and open taskmanager
- TopMost Window
- Handles system message through WndProc => &H2 (destroy) and if you got a way to 'close' this , it will reopen automatically
- Disable SC_Close with CreateParams (alt + f4 doesn't work)

I guess it can be considered as ransomware.
