Thread: [Problem with monitor mode interface on kali linux 2020](#)

augustcvz - May 28, 2020, 7:34 am

I'm trying to get a wlan0mon interface but it's not working for me. I can get it into monitor mode but I can't get a different interface when I do airmon-ng start wlan0 like other people in tutorials do. For them it switches to wlan0mon, but not for me. I can't post images or links which sucks but basically says mac80211 monitor mode for wlan0 already enabled for [phy0]10) and iwconfig shows me just a wlan0 interface.

really stuck here lol, thank you in advance!

Which Wifi adapter are you using?

ETH - June 6, 2020, 9:27 pm

Kali supports only limited adapter

Due to many adapter has lack of monitor mode and can you check the wireless adapter is supported by aircrack-ng

local.host - October 23, 2020, 2:47 pm

yah wifi adapter not supporting monitor mode :) change wifi card of you device

Chipsets I recommend AR9271 , RT 3070 , RT 5572 , RTL8812AU , RTL8814AU

ColdCypher - December 19, 2020, 10:30 pm

An adapter that I picked up for this exact purpose due to airmon not working properly is the ALFA AWUS036NEH
