Thread: [Anyone know of any good Rubber Ducky USB payloads to steal passwords?](#)

nikooo11 - May 29, 2020, 9:44 pm

So I am looking to be able to steal passwords with payloads on rubber ducky, I'm completely new to this and was wondering if anyone was good with writing or understanding payloads and had any advice on how to do this.

Thanks

Depends on the target OS, why don't you check the appropriate GitHub?

[Chrome](#)

[Grab & Mail](#)

[OS X all users \(needs su permissions\)](#)

[OS X SSH keys](#)

[Minecraft password \(upload to FTP\)](#)

[Linux & OS X sudo password grabber](#)

MahonStoN_ - June 6, 2020, 4:08 am

whats your target os? (i guess its kali)

I was looking to get it off chrome on a Windows pc.

I literally linked you something for that, no?

Thank you for sending me the link to the Github. The payload didn't work, I tried editing it to see if anything would but ultimately it didn't. Going to the chrome password link

(chrome://settings/passwords) doesn't work because all of the passwords are typically protected under a pin. I'm not entirely sure, but I think the best way is to download software from online and dump passwords via email using Browser Password Dump(BPD).
