Thread: [Need c++ free Rat download link anyone know?](#)

github88 - May 30, 2020, 3:30 pm

Guys can you share with me a rat which is stable and C++ no any shitty .net dependencies.

I was using 4 years ago njrat and I was happy, I am not sure if it's C++ or .net. If you know where do I get some clean download links, would be fantastic.

Thanks

If you don't care about having a UI and you have a nice crypter, there's a whole bunch of nice command-line ones on github (like ghost, Lilith, or TheFatRat)

github88 - May 31, 2020, 3:38 am

I would like to have a simple rat with a UI.

Well, I can't think of a free (non-cracked) rat that is both native and has a UI. Good luck on your search, though.

njrat is coded in .net

you should have basic info on what tool you use.

It's like I ask you what you have eat 4 years ago in Monday.

I used it in the past many years ago, so I may forget if it was .net or not LOLZ.

as of now you can go with Quasar rat or async rat.

Thanks for your help but AsyncRAT requires the .Net Framework v4 (client) and v4.6+ (server) to run.

As well as Quasar also required .net dependencies from what I see.

njratt required framework 2.0 before 4 years,
New generation rat require framework 4.0 but Framework 4.0 comes installed by default from Win 7 to win 10.
In case you are looking to get into XP, then I would suggest you for native rats.

Like I mentioned before, you're gonna have a very hard time to find a free native RAT with a UI, but most people have .Net installed already so a .Net RAT should be just fine.

Use metasploit like a real man or make your own you can use many languages for that

C

C++

Python

pretty much anything I prefer python
