Thread: [iPhone 8 stuck in startup loop](#)

Gerymc - June 1, 2020, 2:50 pm

Earlier today, my iPhone just randomly wouldn't turn on. I tried some random things online and it is now in a startup loop. Before, it would allow me to put it into recovery mode to try and restore it, but it kept disconnecting during the restore process. It seemed like while it would go into recovery mode at the time, after a bit, it would just try and boot up again. Now, I can't get it into recovery mode even. It just constantly tries to turn on.

I can't schedule an appointment with apple for who knows how long because of covid.

Try the following:

1. Force restart your iPhone;
2. Connect to iTunes to restore;
3. Use Joyoshare Ultfix. It can repair iPhone keeps turning on without data loss.

By the way, if you can get your iPhone into recovery mode, try the tool, which gets any iOS device into/out of recovery mode with one click for free.

I ended up having to get a new phone. I had this one for about 2 years.

I took it to a repair shop and the guy tried out some common things like checking the battery and charging port, but nothing worked.

I'm glad you got it solved.
