Thread: [Rat setup without port forwarding](#)

xScarface - June 3, 2020, 9:10 am

I'm not sure if this is safe or not reason im asking. I use a vm but want to setup my rat so It won't link back to me. I tried to see if i can setup my ports from router but it won't connect via vm and don't really wanna mess with my router anyways.

Method - <https://thehacktoday.com/setup-rat-without-portforward/>

Will this method still work ini 2020 or is it not safe to do. Obv scratch out the vpn he suggested atm I use [censored] so I don't need his vpn he suggested. Lmk if you guys have a better method to secure my rat without port forwarding if that is a thing.

VisualSoft - June 3, 2020, 11:03 am

[censored] wont work as it can not open port.

nvpn is a good one.

if you dont want to use vpn then best secure way is port mapping.

Zinkevin2 - June 4, 2020, 9:39 pm

There is a vpn called cryptic vpn which allows you to use the service for \$25 USD life time. No logs, port forward, switch servers for cheap price under 5 USD. I think the GUI is far more easy than nvpn. I rather use cryptic vpn compared to nvpn but nvpn is still a high quality vpn and when you use RAT your connection speed is very fast and reliable. Cryptic VPN has some time connecting but is still reliable and only 6 USD per month. I just purchased cryptic vpn for 2 days.

After you download the config.ovpn. get open vpn client and put your config in the config folder.

Use a rat that don't require to open ports....
