Thread: [Issue with onetap cracked not loading everything in menu](#)

OfflineUser91 - June 4, 2020, 2:25 am

I'm using onetap cracked for csgo not everything is loading in the menu it only fully loads at main menu or private match not online like deathmatch or casual for example. The things that are not loading are under ragebot tab then exploit tab and this also applies for under anti aim tab, fake angles are not loading so those features are not used or selected and possibly someone other options aswell how would i be able to resolve this could someone help me with this issue

Doesn't appear to be a rat but it's certainly a use at your own risk file.

You ask for help, and then call out another member for "ratting"? Also try opening console with the menu open

I was assuming that it was a rat because it had a password with it when i made rats in the past for testing once i used winrar and created a password to crypt the rat instead of a crypter other people also said the same thing

what do you mean opening console with the menu i dont see any open to do that do you mean using console then typing onetap because it just says unkown command not sure when you meant

PingersAndMash - June 4, 2020, 10:56 pm

Can't believe i wasted my time trying to help you.

Alright i finally tested it and then same issue occurred as i expected mabye i didn't explain myself correctly here are some screen shots of what im talking about mabye that will help

link

<https://mega.nz/folder/nmBEmlgS#t9GjsHaUgUHwNuOkLmTiGA>

not all onetap cracked features are showing and not able to use im not sure who could help me with this issue at this point i'll just give up
