Thread: [crypter & malware not detected, but it gets detected when fused](#)

shlw8 - June 4, 2020, 5:35 am

So I am making my own crypter, I scanned and the stub & malware both aren't detected, but when I fuse/encrypt the malware with the stub the detection rate skyrocket, from like 1/60 to 20/60, why? I have zero idea how this happens, this is very strange and should not be possible.

Any theories?
