Thread: [Obfuscate a Java file](#)

SIM-3281006 - June 5, 2020, 1:25 pm

Please how do I obfuscate a java file... who can help?

Nachfolger - June 5, 2020, 3:14 pm

Good question. I think you can base64 encode it then no one will be able to hack you.

Ok, thanks. Can you give assistance?

GenericSkid - June 5, 2020, 5:23 pm

Use an obfuscator: <https://github.com/GenericException/SkidSuite/blob/master/obfuscation.md>

Unless you mean the source file. You can do something like this:

PHP Code

```
<?php
```

```
// just a comment, don't mind me... \uXXXX \uXXXX \uXXXX \uXXXX \uXXXX
```

The first escape is the unicode escape for the newline character. The rest of the escapes represent the rest of your source code.

Since javac will replace these escapes you can make a comment "executable" with this trick.
