Thread: [Help needed How do i create a clickable button on hackerforums](#)

Robert Smith - June 5, 2020, 9:29 pm

Hey everyone I am new to hackerforums I need some help. Could someone tell me how to make a clickable button that re directs to another site. How do i do i?

Thanks

You aren't allowed to link to other websites at all here, especially before you reach the 25 post limit so you can even start posting links.

You can't make a clickable button, the most you can do is create a hyperlink like so:

[Click Here](#)

Code [url=https://hackforums.net]Click Here[/url]

Do you have a twitter or Insta or Facebook? Let me send you a screenshot of what i am trying saying. I've seen many people do it on hackerfourm

I think you're talking about a clickable image. People create an image that looks like a button, add it to their post and add a link around it, like so:

Code [url=https://hackforums.net][img]https://linktoyourimage.com/image.png[/img][url]

Use png image formats for best text-quality and transparency.

Also the image you use as the button must be served through HTTPS, otherwise it will be removed.
