Thread: [\[ISSUE\]](#) [\[NEED HELP\]](#) Half of my clients dont connect!!! [\[SOLVED\]](#)

LegionTimeTraveller - June 6, 2020, 12:08 pm

Hi guys,

i would like to thank anyone who clicked on this thread and would appreciate if you can help. Please post a comment in this thread so it can get more attention.

Now i will explain my issue..

I am using multiple different RATs to crypt and experiment with. i have had success with my RATs to gain clients. I have very little amount of them but i do know how to spread them easily.

Few years ago i had few 100s in my no-ip however it got banned and lost all of them. so i came back again and trying to see if i can have a better luck.

My issue is, that my RAT/PATCH is not giving a connection.

I have port-forwarded correctly, my ports are open (checked it via a website).

I am using a VPN to open the ports (I know its bad to use this but its my only solution due to my current condition)

I am using a VM to hold everything with Windows 10 installed in it with all the latest updates.

I have disabled all Anti-virus that are on (nothing is installed other than Windows 10 defender and it has been disabled from registry)

I am using multiple different RATs and still have the same issue (Used: AsyncRAT, RevengeRAT and njRAT)

I am using dynu to control my ip. (i have tried NO-IP and still having the same issue).

I have used both RAW file from the RAT WITHOUT crypting it and WITH crypting and still doesnt work.

The RAT is ALIVE in the victims PC and COMPLETELY FUNCTION.

It already works with some victims but fails with others.

Now this issue is NOT SIMPLE. why you might ask? because i have tried it with my friend

When my friend is NOT CONNECTED to a vpn, i can NOT recieve a connection from him even when ALL of his AV are disabled. (ONLY Windows defender is installed)

AS SOON AS HE IS connected to a VPN, he comes back in the RAT and receive a connection.

I have tried this with other people (my friends) and still have the same issue. The rat is live but no connection.

i am very confused to why he is not showing in my rat without a vpn but he is able to show with the vpn on.

vpns that have been tested with are:

openVPN (some random connection with ports enabled)

[censored] Premium.

hmmm This seems to be a Tricky situation. There might be something somewhere malfunctioning like a firewall or sumthing.

If u have discord then add me and i will have a look into it.
