Thread: [R.A.T : My clients disappear :/](#)

b1nary21 - June 7, 2020, 2:04 pm

Hi all

I need your support :) my rat connects correctly, the ports are open, however my clients every time they restart their pc disappear, I've even tried infect me myself, restart my pc and also disappeared .-.

I would like to know if you can help me, I know that nothing is free, so I can make a donation if you help me solve this

NOTES:

- about rat: I use async rat (latest version)
- about vpn: use vpn with port forwarding
- about crypter: I use CoakCrypter v2.7.1 (my result is 2/36)
- about auto star-up: I don't use auto star-up from the async rat, I use auto star-up from my crypter

-if you see the images, my ports are open correctly

-firewall: in this case the open port is 9022, both have been authorized in firewall

please help me :)

I can authorize the support from teamviewer

I use discord/telegram

NYANxCAT - June 7, 2020, 2:09 pm

Or you can just contact the crypter seller to support you for free and to fix his bug.

Oldylox1 - June 7, 2020, 2:27 pm

It would suggest there is a bug with the crypter/your settings are not correct. As NYANxCAT says, contact the crypter seller and ask him to help.

I don't use async rat but I used Warzone & Hive. Both of them with RAZ Crypter (Private Stub) and Spartan works fine with startup.

Hi Nyan:D I am like your fan: D

I also consider that, what you mean is that it is probably a crypter start-up error?

I also consider that, what you mean is that it is probably a crypter start-up _error_?

You wrote "-about auto star-up: I don't use auto star-up from the async rat, I use auto star-up from my crypter"

Obviously the startup in whatever crypter you are using isn't working, so use it from the rat instead.

thanks for this possible solution,

I will try it right now, I will tell you how it went in a few moments

Kindness - June 7, 2020, 6:08 pm

It is not AsyncRAT problem.It is your Crypter Problem.You can enable start-up from RAT not from Crypter then test this in your vmware/virtualbox if it works or not !

VisualSoft - June 7, 2020, 11:41 pm

this is wrong,

Install should be always used from the crypter and not from the Rat, Cause if rat is injected into regasm then if the install is from rat, then it will install Regasm in place of the crypted file.

Thanks for your nice info brother.I had no knowledge about this,You know better than me as a crypter Developer.But In my case,I did this types of practice using IM5 and it did not make problem.

that purely depends on the settings from the crypter, in case you are using self injection then you are fine, but if you use any other injection then it will be bad for you.

b1nary21 - June 8, 2020, 12:54 pm

SOLVED

Apparently it was a start-up bug, as indicated by nyan-x-cat

Thank you all for your comments

from crypter : o

Kayfox 2.0 - June 9, 2020, 5:19 am

I keep hearing everyone say "oh its the crypter"
"it's the crypters fault"

and yet nobody even knows what rat he's using..

No spam bro plis

The name of the rat is indicated in the description

It's Async RAT by Nyan The Cat
