"action replay" something..? There has to be a confusion. Save Wizard is a PS4 save modding/signing tool.

The reason it's so demanded is that it's the only one that is available.

There have been open-source projects with people working over time to decrypt PS4 saves and figure how they work (signature, other info etc.), they were getting somewhere, but nobody had made a full functioning program for PS4 save editing until Save Wizard appeared, and though they must have been able to make their program thanks to FREE open-source projects that others worked worked in (maybe themselves too but idk), they made it a very expensive Paid software. Basically, it's the only one available in the community, so it's the only option, so they have the logical and beneficial chance to give it a high price.

It's kind of annoying though, not everyone would spend so much on something they'd use just once (e.g. to sign a save with their main PSN account so that it works there), so then there's no other way to do it.

?? (if someone has a key please share it, especially multiple ones, if it works anyway for multiple people to use it)
