Thread: [\[L33T/UB3R\] FREE Access To The BEST Crypter/Crypting Method \[Long FUD Time\] 100 Days](#)

Crypto God - June 9, 2020, 8:31 am

I'm providing a javascript obfuscator I have paid for 100 days of use. It is the best js obfuscator out there.

I can give you full access to it.

You can crypt your RAT's with this. I recommend using Async and uploading your other unencrypted malware via memory to bypass AV on those. Unless you find other .NET RAT's compatible with this crypting method.

<https://hackforums.net/showthread.php?tid=5920290> check out this if you need a FUD crypting method.

So basically I'm providing high quality members an amazing thing right now. Full access to the best js obfuscator with 'enterprise membership' so you get all the features.

<https://prnt.sc/swnlll> this is what it looks like. You can download the program from their website, and you can enter the provided key I give you for full access.

FUD times last very long. Bypasses WD no problem for a very long time. Even if your RAT/js file is uploaded to VirusTotal.

I have been using this crypting method for a long time. I'm not trying to kill crypter sales here or anything, because they're all great! But I am trying to get rep up and help members and potentially find ratting partners.

Let me know and you're welcome! (if you're HQ) ?

No problem man hit me up. I'm able to assist anyone. It's truly the best crypting method IMO.

You guys should get vSupreme Crypter v0.2 for this. (It's free, google it)

You can get it completely FUD if you mess with the settings. All enterprise options available.

The membership itself on this obfuscator is worth \$400 (\$80/m)
