Why is your thread approved by staff just because you added some green letters at the top of it?

You have 300k botnets? You must have thousands of developers to get such a huge number ;)
And your botnet only has password recovery? Which browsers are supported? What about download & execute?

Which languages is your botnet coded in? Is it FUD?

We need more information.

<https://prnt.sc/szmiav>

Please PM me.

You are solely getting access to all of the Bots, not the botnet itself.
We have a special coded "Google Chrome" version of our own you can download along with your bot.

It will preinstall your cookies, cache, and fingerprints for each individual bot.
