Thread: [start python application from c# or vb.net](#)

madeha elsayedxxxx - June 11, 2020, 6:35 am

hello every one

i am new in c# , i made python application and it compiled correctly ,
however i want to start this python application from c# code using(Process.Start(""));
but it doesn't work!
how to run this python application from c# code
please not that the application is compiled ,
i want to run the application (not the code)

thank you very much

but i want to run(python .exe application) after compiled , not python script
when i use proces.start , the application don't run

If it's in the same directory you need to load the Applicationpath + "/app.exe" so like
Process.Start(AppDomain.CurrentDomain.BaseDirectory + "/app.exe"); or something

if not you'll have to specify the full directory
