Thread: [BitRat \[Tor Hidden Service Tutorial\]](#)

Kayfox 2.0 - June 12, 2020, 3:23 pm

Well, as some people may have noticed there's a new rat here on our wonderful forum, and I'm bored and thought I'd be helpful, so I'm making this for everyone who's curious, and to save the dev some time from explaining this to every single customer who wants to know.

Obviously, start off by opening the rat
Right click anywhere on the rats UI and go to settings

once your in settings obviously start the tor port
<https://prnt.sc/syrzy8> Click both boxes highlighted in red (Make sure to start the port once again)

Once you've done that, enter a service name and click start, autostart is outlined in blue, as it is optional.

<https://prnt.sc/sys37j>, copy your generated hostname, and click save.

Next we go to the builder, once again we right click and open the builder.
Once we're in the builder, enter in the following necessary information, set your settings.
<https://prnt.sc/sys53c> Make sure to tick the tor connection setting!

the port is automatically set to 80, enter the password YOU set in YOUR settings.

That should be it, if you have any issues let me know.

Update: No, I hold no affiliation with the developer of BitRat. I made this because I was simply bored and thought of productive ways to spend my time.

shako - June 13, 2020, 2:14 pm
very useful for many guys.

kekko00 - June 13, 2020, 2:31 pm
good job thank you... share the link pls?

@UnknownProducts
Thank you for support.

Sacred Geometry - June 17, 2020, 10:57 am

So this completely eliminates having to use a DNS and like No-IP for example and port forwarding a VPN? So if I built the client using the Tor service the only thing I would really need would be a crypter, no need for a DNS and VPN?

Kayfox 2.0 - June 17, 2020, 11:42 am

So if I built the client using the Tor service the only thing I would really need would be a crypter, no need for a DNS and VPN? Like Kayfox 2.0 say - the short answer is yes.

You can use your IP or DNS when using Tor. Not only .onion (hidden service).
If you want to use your IP or DNS for Tor then you must also forward the Tor port in settings.

If you want to use the .onion address then no port forward is needed, not VPN and no DNS. You can use VPN if you want but not needed.

.onion (hidden service) is much safer then Tor with DNS/IP but is also slower.

dontaskmewhy22 - June 21, 2020, 6:57 am

BitRat doesn't have a startup method right?

UnknownProducts - June 21, 2020, 11:37 am

(Jun 21, 2020 06:57 AM)dontaskmewhy22 Wrote: [\[CITE\]](#) BitRat doesn't have a startup method right? Of course there is startup. Choose install when building and hidden startup is added automatically

hdmi - June 21, 2020, 1:07 pm

interesting thaks to share :)

Worked on none of my devices. Had to purchase a crypter to get it to work sadly.

lululululu - June 27, 2020, 9:21 am

Hi, i tried this many times, and it dont work for me.

What am i doing wrong?

In settings. You need start socket for Tor port.

Smoky - June 27, 2020, 1:14 pm

Just a question, for miner it there is just to fill pool, wallet, password and nothing else?

UnknownProducts - June 27, 2020, 2:12 pm

(Jun 27, 2020 01:14 PM)ogkushmed Wrote: [\[CITE\]](#) Just a question, for miner it there is just to fill pool, wallet, password and nothing else?

Yes. This is everything.

Smoky - June 27, 2020, 2:33 pm

Thank you and really nice product, fluid, persistent, good remote browser, connection option via hidden service is not to be neglected and works perfectly well !!

a little less for password recovery which does not find anything but from what I understand you do not want to develop this too much (read on dev thread ...) ... other than that I highly recommend, frankly great RAT !!

drewkasp - June 29, 2020, 2:12 pm

If i use my DNS for Tor, does it give it some extra layer of security?

(Jun 27, 2020 02:33 PM)ogkushmed Wrote: [\[CITE\]](#) Thank you and really nice product, fluid, persistent, good remote browser, connection option via hidden service is not to be neglected and works perfectly well !!

Password Recovery is very important, also, does it have Download & Execute function?

UnknownProducts - June 29, 2020, 3:06 pm

glad to see you doing updates

Smoky - June 29, 2020, 5:41 pm

Thank's for updates @UnknownProducts,it's so nice to see you maintain this jewelry ...

drewkasp - June 30, 2020, 4:40 am

Which crypter works?

i have tried crypting but it doesnt work after i crypt

Joeblow12 - July 8, 2020, 10:47 am

I'm in the same boat. I cannot find a cryptor that works with this RAT. I've tried Cypher Seal, RAZ and Tom. None of them have been able to crypt the RAT. It's either detected by AV or it throws an error of some kind when launching. Has anyone found a crypter that is compatible with BitRAT? Or does dev know of a solution? I love the concept of the TOR functionality but it's not very useful without a solid compatible crypter. I appreciate any advice on this matter.

Thanks

UnknownProducts - July 8, 2020, 5:32 pm

Thanks

Working with crypter developers. This will work soon. BitRAT is native RAT coded in c++ and most crypters coded in .NET

This need some collaboration to resolve. I promise BitRAT will work with many crypters soon and i work very hard everyday to make sure.

This is all I need to know. I appreciate your response and dedication to improving such a great program. I get the feeling BitRAT will easily be THE RAT to have once crypting it is possible. Until then, I will gladly wait. Thanks for responding to my question. Best of luck with your further development. I'm looking forward to great updates.

Good to hear, i've been looking at your product for a while now.... how do we get update once it start working with many crypters, cause that is when i'm waiting for to jump in.the

Will you be updating your post about Bitrat once it start to work with various crypter

UnknownProducts - July 12, 2020, 5:23 pm

Nice.... i do not plan to disturb you this much, but with the example you show me i still won't know if it works with many crypters out there

KasperMisr - July 13, 2020, 2:45 am

I found a good crypter for bitrat , but the output is vbs file , if anyone need help PM me.

YAK_CODER - July 13, 2020, 2:45 am

i think its 1.9 mb server

is it totally native?

i can give a try

yahwehfied - July 28, 2020, 11:17 pm

Guy why you go RIP ME of 30\$
