Thread: [Has there been any source code leak for the "MyKings" bootkit or similar?](#)

Tr0jandog - June 16, 2020, 4:51 am

So i was reading this article about this bootkit called MyKings :

<https://blog.trendmicro.com/trendlabs-security-intelligence/uncovering-a-mykings-variant-with-bootloader-persistence-via-managed-detection-and-response/#>

and it seems really interesting, was wondering is there any leaked source code/released source code of any malware that has capabilities like this?

anyone knows what the real name of this malware is and not the AV detection name?

bootkits are simple, just copy a file to startup directory with a modified BIOS and your good.
