Thread: [Crawling site gives me captcha](#)

mimic - June 17, 2020, 5:56 am

I was crawling <http://www.imenik.hr> (more specific: <http://www.imenik.hr/imenik/trazi/1/ptt:51551.html>) and it was working. I used PHP Symfony crawler, I even used proxies. I was testing it locally so I tried without proxies.

I added 5 seconds of sleep time between each requests. After only few requests it gave me this page <http://www.imenik.hr/imenik/captcha.html>

I tried incognito and it gave me the same page. I guess it ties my crawling with IP address. Does anyone knows how to bypass captcha?

MagicSphere - June 17, 2020, 7:51 am

Use 2captcha or other similiar service.

NAGA SADHU - June 17, 2020, 8:12 am

Use socks5 proxies or use tor for free roating proxies.

if you are still getting captcha , use 2captcha to solve or add a random sleep time like between 3 to 6

Why do you think socks5 proxies will work?

And whay do you think random sleep time will work?

You may use premium services for solving capcha there are many

Pownerz102 - June 22, 2020, 4:53 pm

use better proxies and you wont get a captcha
