Seems like a nice offer. GLWS.

Any chance you could give me some info on how email spreading works? What templates do you include? Do you have an Amazon gift code template? Are FUD .js files in a zip blocked attachments by email providers?

I'm looking to get into email spreading. If you can help set me up, and let me know what sort of results to expect, I would be more than happy to pay you a fair price.

Yes I can provide some templates if you would like,
You should be able to send .js if you zip the file before, but doc/xls is best for emailing as you don't need to zip it.

I will send you a PM now!

So with what you're offering, basically all that would be needed would be an email list, is what I'm getting from all this?

Noob here. So could this package be used to hack an android phone? Have a RAT/spyware embedded, and then send the email to the target phone. Would it get around any antivirus apps installed on the phone? So instead of doing a mass emailing, would just be targeting one (possibly two) emails. Thanks for any assistance in advance!

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.
