I knew the thread, but you may want to edit your OP to back your claims, even if proven in other threads.

Yeah thanks for the quick analysis.

the traders are a mixture of scalp and swings. Most losses will be scalp trades so the losing trade count doesnt matter.

You have to also look at the profit i gained. i have gained the losses + profit which i lost in a few trades. its like if i lost like 3-4 trades i have gained that + profit in the next trade. its always like 3:1 or plus. if i had lost 3 i would gain it back in the next or the trade after.

My winners weigh over the losers and thats what matter. not the trade counts.

Also that was just my bitmex i am growing rn. There is a lot of spot buys i am still holding.

Yeah everything is up for free. But is it the right away to do it? probably not. 90% of the free stuff u get online is BS.

I am not forcing anyone here. i have my free telegram channel and my old threads of TA. if they like it, they can take it otherwise i dont have a problem.

This is for the people who wanna be spoon fed and learn some proper ta other than triangles and 100 indicators.

Your logical is like, there is google why get school education.

Yeah sorry i cant afford a pc rn too poor
