Thread: [SOLVED! \[Bug\] Signature font size code is disappearing after saving](#)

LoremIpsum - June 20, 2020, 5:45 am

Update; Problem solved - bad code formatting.

Solving reply;

(Jun 20, 2020 06:42 AM)Xerotic Wrote: [\[CITE\]](#) You are using bad formatting.

Never put any tags around LIST / ALIGN / SPOILER tags.

That's means all FONT and styling tags must be completely contained within any ALIGN / LIST / SPOILER tags you have.

You'll never have a formatting problem again.Issue I had;

Changed the font size of my signature space and save it to all existing posts.

I noticed the code of the font size disappears after saving it. Tried to make a GIF about it, hopefully it's clear enough.

large gif [\(Click to View\)](#)

More info;

After you save the new font size of your signature space, you see the code disappears.

It doesn't matter if you keep the signature like that, but when editing it again, it's annoying.

So after you added the font size, and saving it again, for let's say, fixing a typo, you'll get the original font size back.

Although I think it's a bug, I am not sure and posting this here to see if other members got the same 'issue' as I do..

This doesn't just happen with sigs and size. It happens with threads and color too.

Xerotic - June 20, 2020, 6:42 am

You are using bad formatting.

Never put any tags around LIST / ALIGN / SPOILER tags.

That's means all FONT and styling tags must be completely contained within any ALIGN / LIST / SPOILER tags you have.

You'll never have a formatting problem again.

That's means all FONT and styling tags must be completely contained within any ALIGN / LIST /

SPOILER tags you have.

You'll never have a formatting problem again.

It was just a fast example of showing it in the GIF.

I usually do it like this and please correct me if I'm doing anything wrong;

[code]

[align_code] [URL code] [Color code] [Font sizes]

some content here

[closing font] [closing color] [closing URL] [closing align]

If I do it like that, will I have no issues when refreshing?

If you do it like that then it should be fine.

Editing it for the 12th time or so haha and it works now.

Code

[align=center][size=x-large][url=https://hackforums.net/lottery.php?action=view&lotid=1940][color=#3399ff]Rare Blue Egg[/color] Lottery!

[color=##ff3333]Click here to buy a ticket[/color] only 10 bytes![/url][size]

[/align]

Even after refreshing, it stays like this.

I had issues with;

< double links (adding an extra URL + closing tag)

< double [size] tags

And they are all gone now. Thank you my man!
