Thread: [New 3D Stuff i made to, again only to practice](#)

H00L - June 20, 2020, 6:39 pm

Hey!

My last thread like this got good resonance so i thought i update you guys.
Its all pretty basic stuff as i focused on building a scene and creating different materials in octane.

I use C4D R19 and Octane Renderer.

Rate from 0 - 10 if you like ?

These are pretty large images, sry.

Floating parts of a pyramid with glowing ring around:
Spoiler ([Click to View](#))

Some pyramid in darker moody lights:
Spoiler ([Click to View](#))

Gossy transparent ring with a glowing ring inside:
Spoiler ([Click to View](#))

Let me know guys ?

It's pretty good. The color scheme is nice. The only thing I would say is that the quality could use a bump up! Other than that nice!

Im totally on your side there. But for what ive planned (IG posts) the quality is just fine. For PC Screen resolution the renders would really lack in quality. Thanks for the feedback ?

LoremIpsum - June 21, 2020, 12:29 pm

I like the third one best, as the colours appeal to me.

For someone who didn't do this for a long time, you are doing it well I think!

Leon Robb - June 21, 2020, 12:32 pm

This is awesome bro. Do you work also for 3D graphics animation? I have some upcoming projects related to this. Convo me if you can.

Thanks i like the third best too ?

Yea mainly im doing music production and i use graphic design as an outlet whenever i face writersblock or lack of creativity.

My System is a bit too weak to render animations in a good way, sadly ?

But explain me your details, maybe i can forward you to a friend who also does this and has a bit more power.

Hmm there's something wrong that I dont like, the 1st and 2nd got some illumination issues or the colors doesnt match that much, I would have a look and try again.

But the 3rd one looks really nice, good job.

0ROLIO - June 23, 2020, 6:51 am

Really good work. Maybe simulate the circular thing in the second image and add collider tags and add gravity so that it seems the circle is falling but is blocked by the pyramid. Also which version of octane are you using? I can't use octane after I upgraded to my 2080 Super recently as the older version doesn't support RTX cards. And there's no cra... ahem ahem, you get me.. for the new version.

I think i use the same version that you use then, because i got the version gifted from some dude on youtube, if you know.. ?

Good thing to know that the RTX cards are no supported, i didnt know that. You just saved me a lot of money. I didnt ever mess with any gravity tags but the idea is pretty cool i would dig that a lot
