Thread: [server seed SHA256 needed](#)

ventolin - June 21, 2020, 10:40 pm

I need to obtain the server seed revealed SHA256 from a dice game

server seed hashed is:

0be640b1d0566bfaf9a564e13796d7b824db30ec48edbf923c4433e644fb24f4

need the server seed revealed

0.01 BTC offered

In order to verify you decrypted the correct hash send the first 5 nounce roll numbers, after sucessfully i verify the hits i will send the 0.01 BTC and you send back the full server seed revealed

Here is all the data you need:

Client seed: 25265724967994a01765

Current server seed hashed:

0be640b1d0566bfaf9a564e13796d7b824db30ec48edbf923c4433e644fb24f4

Hello ventolin i would love to help but u know that server seeds are 64 hex sha256 hashes encrypted into another sha256 hash called server seed hash (hashed), which makes it very extremely hard to decrypt, it its not a simple word or a string of 6 or 7 characters, its a very long string. There are few billions of server seeds in database against the whole number of sha256 hashes in exsistance which is 0.1% of atoms of universe. As for client seed it does not play valuable act here, only server seed is the main thing and client seed is used to modify the result.
