Thread: [Need Wordpress hosted on AWS migrated. Getting database error](#)

Joy - June 23, 2020, 1:32 pm

Basically i was trying to migrate a site to another hosting from AWS and used the migrate plugin. It somehow didn't work and now the sites still on AWS and i get a "Error establishing a database connection" error. Can someone who knows AWS and Wordpress help me out.

I forgot to take a backup before migrating.
