Thread: [Native USB Spreader / P2P Spreader](#)

lukezimmerer1234 - June 23, 2020, 11:20 pm

Anyone know of a good , NATIVE and stable new method (.ink desktop shortcut) with hidden desktop shortcut USB spreader with optionally a P2P spreader and optionally winrar/archive spreader. It needs to be an auto spreader but without the autorun.inf old method spreader.

It MUST be free or cheap paid. If none free good desktop shortcut .ink ones, mention the old autorun.inf ones but free ones or paid cheap ones below \$20 USD.

I need USB Spreader which can download file from internet like file.io NOT uppit.com - uppit dont allow exe.

File.io allow exe to download. Will File.io website work to upload server.exe and direct download? What site best for direct access file for file downloader?

The downloader must have feature like download file and/or bind file feature. It can also have start up to appdata feature and hidden start up like hide install path and file and melt file once downloaded.

I looked at M0AX spreader but thats .NET.

I went to connect-trojan.net and all i find is H-Worm which allow me to bind file and use as worm spreader but that can easily cause detection. I use securifer crypter to crypt file and its 2/36 FUD on kleenscan with 1 secure age apex and norton detection. Secure apex age no one uses and norton i guess i must change assembly or apply some more encryption on to fud.

Well. I need a spreader to get exe from file upload site like file.io and execute silently without UAC prompt and windows defender alert and smart screen bypass.
