Thread: [Hacking a wordpress site with wp-config.php](#)

MikeGolfRomeo - June 25, 2020, 3:20 am

I have a wordpress site where is wp-config.php has been leaked...

PHP Code

<?php

```
$temp_ip = explode(',', isset($_SERVER['HTTP_X_FORWARDED_FOR']) ? $_SERVER['HTTP_X_FORWARDED_FOR'] : (isset($_SERVER['HTTP_CLIENT_IP']) ? $_SERVER['HTTP_CLIENT_IP'] : $_SERVER['REMOTE_ADDR']));  
$remote_addr = trim($temp_ip[0]);  
$_SERVER['REMOTE_ADDR'] = preg_replace('/^[^0-9.:]/', '', $remote_addr);
```

```
define( 'DB_NAME', 'privater' );  
define( 'DB_USER', 'privater' );  
define( 'DB_PASSWORD', 'private' );  
define( 'DB_HOST', 'private' );
```

```
define( 'DB_CHARSET', 'utf8' );  
define( 'DB_COLLATE', '' );  
define('SUBDOMAIN_INSTALL',true);  
define( 'VHOST', 'yes' );  
//define( 'WP_ALLOW_MULTISITE', true );  
//define( 'MULTISITE', true );  
//define( 'SUBDOMAIN_INSTALL', true );  
define( 'WP_ALLOW_REPAIR', true );  
$base = '/';
```

```
define( 'DOMAIN_CURRENT_SITE', 'private.co.uk' );  
define( 'PATH_CURRENT_SITE', '/' );  
define( 'WPLANG', 'en-GB' );  
define( 'SITE_ID_CURRENT_SITE', 1 );  
define( 'BLOG_ID_CURRENT_SITE', 1 );  
define( 'AUTOSAVE_INTERVAL', 120 );  
define( 'WP_POST_REVISIONS', 10 );  
define( 'EMPTY_TRASH_DAYS', 7 );  
define( 'WP_MEMORY_LIMIT', '512M' );  
define( 'WPCOM_API_KEY','private' );  
define( 'TUKOD_MSSN', true );  
define( 'ALLOW_UNFILTERED_UPLOADS', true );  
define( 'DISALLOW_UNFILTERED_HTML', false );  
define( 'FS_METHOD', 'direct' );  
define( 'WP_DEFAULT_THEME', 'twentytwelve' );  
define( 'PSTS_DONT_REVERSE_LEVELS', true );  
define( 'PSTS_DEFAULT_LEVEL', 1 );  
define( 'PSTS_DEFAULT_PERIOD', 1 );  
define( 'PSTS_CANCEL_LAST', 1 );
```

```

define( 'DOMAINMAPPING_ALLOWMULTI', 'yes' );
define( 'WPMUDEV_HIDE_BRANDING', true );
define( 'WPMUDEV_LIMIT_TO_USER','31505,97879,9,8469' );
define( 'DISABLE_WP_CRON', true );
//define( 'ALTERNATE_WP_CRON', true );
define( 'SC_WPFMP_ADMIN_ALERT_PERMISSION', 'manage_network' );
define( 'WDS_SITEWIDE', false );
define( 'AUTH_KEY', 'private' );
define( 'SECURE_AUTH_KEY', 'private' );
define( 'LOGGED_IN_KEY', 'private' );
define( 'NONCE_KEY', 'private' );
define( 'AUTH_SALT', 'private' );
define( 'SECURE_AUTH_SALT', 'private' );
define( 'LOGGED_IN_SALT', 'private' );
define( 'NONCE_SALT', 'private' );
define( 'COOKIEHASH', md5('private') );
define( 'WP_CACHE_KEY_SALT', 'pb' );
define( 'WP_CACHE', true );
//define( 'ADMIN_COOKIE_PATH', '/' );
//define( 'COOKIEPATH', '/' );
//define( 'SITECOOKIEPATH', '/' );

// needs to be hashed out for upgraded plugin
//define( 'COOKIE_DOMAIN', '' );

define( 'POST_BY_EMAIL', true );

define( 'LOGINFORMKEY', 'private' );

define( 'GF_RECAPTCHA_PUBLIC_KEY', 'private' );
define( 'GF_RECAPTCHA_PRIVATE_KEY', 'private' );
define( 'GF_LICENSE_KEY', 'private' );

$table_prefix = 'wp_';
if( $base == 'BASE' )
die(
'Problem in wp-config.php - $base is set to BASE when it should be the path like "/" or "/blogs/"! Please fix it! );
if ( !defined('ABSPATH') )
define( 'ABSPATH', dirname(__FILE__) . '/' );

$redis = array(
    'host' => '88.208.201.123',
    'port' => 1234,
);

//define( 'WP_DEBUG', true );
//define( 'WP_DEBUG_LOG', true );
//define( 'WP_DEBUG_DISPLAY', true );
//define( 'DISABLE_WP_CRON', true );
//define( 'CONCATENATE_SCRIPTS', false );
//define( 'WPMU_ACCEL_REDIRECT', true );

```

```
define( 'SUNRISE', 'on' );
require_once(ABSPATH . 'wp-settings.php');

define( 'WP_AUTO_UPDATE_CORE', false );

i replaced private info w/ "private"
```

How could i hack them?

Sickness - June 25, 2020, 3:22 am

Are you literally dumb? You have on the first lines the define variables for the connection to the database, you can do many things with just that. Use your head or just leave it alone, asking this clearly shows your intellectual level.

MikeGolfRomeo - June 25, 2020, 3:25 am

I dont understand, how could i recreate that and steal data?

Google how to connect to a database, but, if I was you I would literally leave this cause you're gonna leave many footprints.

Ok, but what about all the keys, and salts? What can i do with them?

Sickness - June 25, 2020, 4:10 am

```
define( 'DOMAIN_CURRENT_SITE', 'private.co.uk' );
&
$redis = array(
    'host' => '88.208.201.123',
    'port' => 1234,
);
```

you just left this important information, this shows how dumb you are, also, the site doesnt host anything now so I dont know if they removed the site or whatever.

Yes it does, the domain i changed to private.co.uk lol and the port hehe
Anyway look up the domain "primary blogger". All the websites it hosts have there config.php open

wp-config.php.save
| Found By: Direct Access (Aggressive Detection)

It hosts websites all which have the vulnerability above. Just search it up and hack away lol

Port 3306 and 6379 doesnt connect properly, used the user and password inside that file and seems that is old as hell and they got another password, or just accept connection from the same machine, one of those.

(Jun 25, 2020 05:53 AM)MikeGolfRomeo Wrote: [\[CITE\]](#) So it worked?
I mean that I used the parameters found there but no can't connect, search on google so you'll learn how to do a mysql connection.

Contact me on private, you are leaking too much sensitive data.

Sickness#0001

MikeGolfRomeo - June 25, 2020, 5:59 am

I cant need reputation, you do it to me

taffy00 - July 5, 2021, 4:55 pm

I am also interesed how to connect to a wp database if I have the config.php file please teach me

thacker3 - July 7, 2021, 9:58 am

Did you find someone to help?

laron - July 18, 2021, 3:20 pm

This thread is brutal.

but dude if you are not 100 on your hacking skills
it's best not to mess with it and instead find a
professional.

That's what I do.

Dolla\$ - July 20, 2021, 10:30 am

Hello, just to make things clear.

A WP-config files is a file which contains the Databases creditentials.

You could potentially connect to the database using a tool such as : Adminer or HeidiSQL.

With this you could wipe/edit/download the databases

Keep in minds that most of the server nowadays only accept self-hosted (localhost) connection, which means that you won't be able to connect using an external IP adress even if you have the right creditentials.

xx
