Thread: [Escrow.com like service with cryptocurrencies?](#)

chaha0s - June 26, 2020, 10:52 am

New here. Do tell me already existing ones below.
escrow.com does not have an option for crypto.

wanted to know how the site verifies how the platform confirms the trade before releasing money.
And are escrow services with cryptos on the internet legal?

Omniscient - June 26, 2020, 1:33 pm

You can try [Bitrated](#).

They offer maybe something you're interested in. You didn't really describe what you're trying to do.

I don't want to use it. Just wanted to find out about service rn.

Also I wanted to find out how these sites verify if a seller has completed his promise and then release the payment.

Thanks for your reply.

KYS at least provides more protection and less risk imho.

Yeah I like it feels more trust worthy just a lot of people on here don't like to verify so I figured I'd mentioned it before he got too deep into it

mkrojtovic - June 29, 2020, 3:55 pm

You have Bitify as well or Escrow as you said
