Thread: [How To Find All Pages within a website you don't own?](#)

Dr.Hurlu - July 1, 2020, 3:00 am

Let's say I want to find out all pages from examplewebsite.com

Links like this: examplewebsite.com/login or examplewebsite.com/members/ or examplewebsite.com/2312831451410/

How do I go about that? especially if they're sort of hiding certain pages.

The PC Guy - July 1, 2020, 3:07 am

<https://pentest-tools.com/website-vulnerability-scanning/discover-hidden-directories-and-files>

Find different tools to explore the dir of websites

Correct term is a 'URL Fuzzer'

Tried dirbuster yet? It has a built-in wordlist, also has bruteforcer mode. Mutli-threaded too in case you want it faster.

It's one of my faves:

Code <https://tools.kali.org/web-applications/dirbuster>

If you want the Java version (to run it on Windows) here:

<https://sourceforge.net/projects/dirbuster/>

Screenshot:

Note: it's really fast so you have to tweak the threads and the request rate cos you might get blocked by the WAF, thinking you're doing a DDOS.

Kali also has dirb

Code apt-get update

apt-get install dirb

dirb -h

There's also gobuster and wfuzz but I don't have a lot of experience in them (I'm pretty narrow-minded when it comes to using new tools lol)

I hope all goes well, mate

Thanks a lot for the recommendation!

Awesome, I'll give it a go on windows real quick. Thanks for the help mate!

frank3nstien - July 1, 2020, 4:11 am

Before run any scanners just use few methods like

- Request robots file which extract links from it "example.com/robots.txt"

- Request site map same as above "example.com/sitemap.xml"

Above methods will work silently than network noise.

And the best one is use Burpsuite to crawl all pages.

bdkalkun - July 1, 2020, 10:03 am

You can use screamingfrog for this

00day - July 5, 2020, 4:52 am

there is only 2 ways to do this :

- 1-url fuzzing using many different tools like gobuster,dirbuster,wfuzz,ffuf etc ...

- 2- download the webapp source code (if its available online) locally to see the site structure and hidden files
