Thread: [Offering Various Services \(Programming, Bots, Automation, Pentesting, Reversing, etc\)](#)

Strigidae5555 - July 6, 2020, 5:50 am

Hello. I've been on HF for a while but haven't posted yet. However i've recently decided to offer some of my services here.

Here are some things i've done in the past:

- Developed bots (for discord, forums, various websites, etc.)
- Developed android apps
- Reverse-engineered android apps
- Reverse-engineered both .NET and native programs for windows
- Written scripts for automating various tasks
- Developed custom RATs
- Developed a windows kernel rootkit (before DSE was a thing)
- Developed password/token grabbers
- Written REST apis
- Reverse-engineered private REST and Websocket APIs
- Developed exploits for web-based applications
- Developed MBR/UEFI bootloaders for x86 devices
- Written a .NET crypter
- Developed scanners for finding vulnerable servers and IoT devices
- Developed web scrapers

Programming languages I am familiar with:

- C/C++
- Python
- C#
- Ruby
- Javascript
- PHP
- x86 Assembly

Platforms i've developed for:

Windows, Linux, Android, Web, Samsung Smart Fridge

I'd give examples of my past projects but they're all either private or associated with my real name. However i'm sure people here will be able to vouch for me over time.

I'm quite a fast learner and can gain new skills very quickly. If you need something that doesn't exactly align with any of my skills, but is in the general area, there's a chance I can teach myself.

Contact me on Discord and we'll get into the details. As of right now I only accept payment in BTC.
