Thread: [RexDigitalShop looking for cheat providers, using XenForo and InvisionBoard](#)

**Menalix** - July 7, 2020, 12:19 pm

Hey at [/3gva5AF\]RexDigitalShop](#) we're looking for two cheat providers who wants a free integration of a much better payment solution.

Currently supported payments:

Stripe: Major Credit-Cards, Sofort, iDEAL, AliPay, WeChat Pay, Apple Pay, Google Pay, Microsoft Pay, Multibanco,

Virtual: Bitcoin, Ethereum, Litecoin, Monero, CSGO Game Skins (auto-converted to crypto)

More payment methods is coming such as PayPal and Yandex (Russia). We're also integrating QuickBooks and Dinero very soon, to carry out bookkeeping automatically, and VPN detection, which forces people only to have virtual payment options available if VPN is used, to give even better dispute protection (Stripe already has a very good one).

The idea of RexDigitalShop, is to create an easy integrateable payment solution, so you can target the whole world. Meanwhile giving customers a sense of the transaction is secure, by redirecting them onto a new page, just like PayPal does. Some people especially in the cheating market is skeptical about entering their information on a cheat website. Cost for all this is only a tiny 1% fee, which is less than half the price of competitors.

You can check our already finished MyBB plugin on MyBB's plugin store.

We are looking for two cheat providers with Invision Board, Xenforo and vBulletin might also have interest.

The problem is in order to make our plugins to IP and XF, we need a license, which cost 600\$ and 200\$....

Therefor we would rather skip that cost, by doing a free integration for somebody already having Invision Board and Xenforo.

The integration will be done by Division, Main-Developer and Owner of RexDigitalShop.

Please contact me on discord: Menalix#0001

If interrested btw, you can also use RexDigitalShop for freelance payments, by enabling a personal "donate" page, which you can redirect people onto, so they can pay.

**H\$G0D** - July 7, 2020, 7:02 pm

Let me get this clear: You want people to use your website, but you're too cheap to pay 800\$ for 2 licenses? No thank you. I'll go to your competitors.

**Menalix** - July 7, 2020, 8:44 pm

(Jul 7, 2020 07:02 PM)H\$G0D Wrote: [\[CITE\]](#) Let me get this clear: You want people to use your website, but you're too cheap to pay 800\$ for 2 licenses? No thank you. I'll go to your competitors.

It's not my website, I'm a customer who offered him an easy way to make a plugin for MyBB, meanwhile I got the integration for free, since he also is my ex-webdev I like to help him with marketing in my spare time, since he is a close friend.

It's very obvious you don't have a business.

In a business it always makes sense to reduce costs, especially in the startup phase. It would be silly to waste 4000+ USD on different CMS's which is licensed, if you can save that money and even get a customer at the same time, by offering him free integration. Which normally would cost around 500-1000 USD here in Denmark atleast, without a plugin.

Not everyone has the luxury of being able to throw money around without a thought. Throwing 800 USD for these two licenses, would put RexShop in a deficit for 3-6 months, based on its current revenue. So buying licenses to make free plugins, is definitely not a good idea from an economical standpoint, right now. Either way, if no one is interested, because RexShop is so-called cheap skates, then we can always do the plugins when were in a better economical standpoint.

Right now there are no plugins for XF or IPB, which isn't just Credit Card and PayPal, PayPal after their recent ToS change, doesn't allow cheat sales. So ye you can go to a competitor, but without free plugins, you would have to pay 200-1000 usd for integration at the competitor. So it would be a way smarter move to just get free integration at RexShop :)

**KnownLab** - July 8, 2020, 1:39 am

I have seen the work on RexDigital myself and can say Division is doing a great job integrating some unique payment gateways such as steam skins and more.

**threadsync** - July 9, 2020, 7:04 pm

Going to P2C's and asking to use your payment processor didn't work I guess.

Here is why, one of the many reasons: You have access to the client's personal information, and, your friend can at any point sell this data or directly give it to you since you are running a (very trash) P2C yourself.

Quit trying to become the next Stripe.

Best regards,  
Capra.

It's hard to get in contact with most P2C, since they have quite anonymous business entities. So the only one's we can contact, is obvious those I know already. but 3 here at HF have already contacted us, and we're in contact with a few others. So we're doing absolutely fine

We don't have access to any of their personal information (except for IP address), since it's directed to the payment processors.

It's funny how a HF user with 595 reps, doesn't know how payment processors is integrated with iframe's actually work, most would assume you would have a basic understanding of tech in general.

We're a legit company who is also restricted by the danish privacy laws, GDPR, plus restrictive EU privacy laws. In Denmark companies is watched quite closely by the state, do something wrong, and you'll have to suffer from it when they drag you into the court room. If we were trying to fool anybody with a bad service, our company and private addresses would of course not be public available, as it is required by danish laws. The payment processors integrated is also reviewing the service frequently, currently Stripe.

I guess you have never tried my P2C, since it's the fastest external aimkey you can get, which doesn't make it shit.

We're absolutely not trying to become the next Stripe, since we are not a payment processor, but a payment processor integration service. And ecommerce is actually not the main focus right now.

Best regards,  
Menalix

I'm not sure why you're trying to give this garbage to P2C's since, if they have a brain to create a P2C they also have a brain to integrate whatever payment processor they want.

Your cheat is nothing good, "fastest external" keep fooling yourself.

Also, please improve your grammar as I suffered throughout your post.

Best regards,  
Capra.

he's most likely looking for 70% of the p2c industry which are pasters and probably the chinese p2c market

Your funny, calling it garbage without arguments. You don't even know the guy who developed it.

Again it shows you lack knowledge of course a cheat using hooks is faster than getasynckey spamming, any programmer knows that. Newbs like you is cancer to any community.

How can you think while looping is faster than hooks lawl.

Anyway this thread is not about my cheat

(Jul 10, 2020 10:36 AM)Capra Wrote: [\[CITE\]](#) I guess their next motto should be "by pasters, for pasters".

Best regards,  
Capra.

Pasters. What a joke. Do you really think I would be allowed in secret.club if I were a paster. You should read some of our articles and check some stuff out on GH. Since you are clearly technically retarded for not knowing what an iframe is, and for believing while loops is better than hooks/callbacks.

And Division is anyway far superior to me, of course he can't copy-paste a full shopify alike + bookholder + stream donations + first ever csgo skin payment + forum subscription system. Otherwise feel free to find such copy paste friendly project.

Hooks or external, choose one.

Best regards,  
Capra.

Wow you are actually retarded. The argument was whether my external was faster than other externals, since I claimed that, because I use hooks for input, while majority loop a winapi call.

Please, learn some grammar before writing to me, you clearly haven't finished school or have some impediment that doesn't allow you to write English properly.

If you hook anything to the game it loses the whole point of being external.

Best regards,  
Capra.

You were the one who wrote to me, it should be very clear from my initial thread post that you were answering, that I'm not a native English-speaking person.

Don't choose to write with bad English speaking people, if it hurt your feelings so bad.

You don't have to hook inside the game to catch input. Don't talk about programming, when you are so clueless. Makes no sense.

**threadsync** - July 11, 2020, 2:48 pm

I wrote two words that have hurt your overwhelmingly fragile ego, instead of answering to that poke you should've answered the rest.

I'm not a native English speaker either, I finished school and university which led to me being a grammar nazi, more or less.

In short, your payment processor is trash, advertising it here translates to reputation suicide as Hack Forums is not a very nice place to advertise it if you are "running a legal company". I don't see Stripe or PayPal advertisements here. Think twice about where you're going to advertise it.

Best regards,  
Capra.

Congrats to you for having an education.

Obviously you are the one with the ego, flashing your educational degree and what not.

Ye sure its trash, still no arguments, you dont know anything, but have some wierd jealousy grudge, and had to run your shitty mouth.

Well since we just got three providers on it. It was definitely not a bad idea. Hackforums is not some dank blackhat area today, if thats what you think.
