Nice one OP. I just signed up and hope to win, and gl to all the other who did!

Username on there: exhrra

**PingersAndMash** - July 7, 2020, 11:22 pm

I might as well give this a try, done

**Armady1** - July 8, 2020, 1:14 am

submitted an approval request :)

I messed up my approval request, but I played for more than one year and cheated for more than one year on top of that I am gnm legit and LE with hacks

**m8than** - July 8, 2020, 7:37 am

Upgraded you guys. Enjoy :)

I think I made an account back in the days, can't remember it.

If you haven't deleted any old users then I might be able to login.

**L0RE** - July 8, 2020, 12:13 pm

It's a good cheat, enjoy your free subs people.

**BOOMHeadshot** - July 8, 2020, 12:20 pm

Can we use the cheat on any account? Just asking cause of the approval thing requires a steam profile.

never heard of highlimits even though i've been cheating for years, interesting to see how your cheat works. Ill buy a sub sooner or later.

your cheat still works as advertised that it works with faceit anti cheat?

name on forums : Elcrewk ( didn't submit approval request though )

\$20 a month? Faceit client? Does that sound right to you in any way? They support server side, but client, no way.

Before you buy this cheat, I would recommend you read this whole thread

<https://hackforums.net/showthread.php?tid=6089986>

This guy admitted he has no motivation to work on features, as well as other excuses and lies. No new features have been added to this cheat in more than 3 years.

He also demonstrated a weak understanding of computer security when challenged.

They don't take criticism well.

Lol sure read the thread. There's no lies there lmao.

I have a weak understanding of pcileech specifically and so do you.

My understanding is very strong, and my teaching you about how it works in that thread after your many misunderstandings helps to prove that.

If anyone wants a better free external cheat, I would recommend

<https://www.unknowncheats.me/forum/cs-go-releases/352322-cornerstone-internal-external-multihack.html>

CornerStone is a great free undetected external hack for cs:go with much better features than HighLimits.

If you're looking for a paid external cs:go hack, I would recommend these external hacks over HighLimits:

HexUI  
LegitEX

I analyzed LegitEx a while back, it got a big yikes from me when it came to security and it definitely isn't undetected on CEVO Celavimus. Do not recommend. In regards to Hexui, never looked at it before so I can't comment.

One more thing, HighLimits is definitely not undetected on CSPL AAC. I honestly see a lot of P2C claiming undetection on that anti-cheat, does nobody realize that it's a boot start kernel anti-cheat with aggressive activity logging? Basically every cheat on the market will get smashed by manual review assuming they don't auto ban you first. I had to find an exploit in that anti-cheat to evade manual review at Leaguemode, it wasn't easy.

If you don't believe me, go look for yourselves, the drivers filename is usbhubmswg.sys and it runs at boot and remains running.

I did look at HighLimits anti-cheat support and though and they claim CSPL AAC support which I gotta say ain't a good look, so many P2C think they support that anti-cheat. Does nobody realize that CSPL AAC is a boot start kernel anti-cheat with really aggressive activity logging? I had to exploit their kernel driver to evade customers getting busted by manual review when I was developing for Leaguemode, it wasn't easy.

Did not know this about LegitEX as they only had one detection a long time ago from what I remember. They are still probably fine for VAC though.

That is crazy they are claiming to be UD on CSPL AAC...wtf

It seems like there are more things wrong with the HighLimits anti-cheat claims after taking a look:

ZENGAMING has been down for a long time

Kickback has been down for a long time

PacificES uses EAC, and I'm pretty sure that HighLimits doesn't support EAC

Thanks for your input Tristan, appreciate it. Good luck with your anti-cheat product!

PacificES doesn't provide PUG/scrim services anymore, they reverted back to just selling game servers so all three of those services are no longer relevant. But I see a lot of P2C still put them down as supported.

Is CSPL AAC different now than 2 years ago?

Back then I had a customer use it there for 2 months without getting banned. He did generate a new build every day though.

Yeah it's kind of ridiculous the amount of things some lower quality providers like legitsense or highlimits claim to support. They claim to be interested in security and protecting their customers, but they don't even know much about the anti-cheats they advertise to support.

Thanks for the entertainment!

You're the clout chaser here lol.

I am the cheat consumer protection agency, I will expose any wrongdoings of p2c providers.
