Hello,

I want to bypass Safengine licenser. I have a program packed by Safengine v2.4.0

When I run packed exe, I got the follow message.

Safengine

This license file has been locked to a different machine.

Current Hardware ID:

So I tried to use UnSafengine, but I got the message "An internal error has occurred." and couldn't dump.

Could you help me?

Looking forward to hearing from you.

Best regards
