Thread: [Data Structures and Algorithms PDF \[IDEA\]](#)

Zenco - July 8, 2020, 8:20 pm

Hello programmers,

Just wondering if anyone thinks this could be a good idea to write, I'm very experienced with the subject of Data Structures and Algorithms. I could potentially release it for free or maybe sell it if it gets enough traction.

I'd love to hear thoughts on this.

you could always do that, there is always a demand for more information and it would sell pretty well if you market it in the right places but the one big downside to this is that there are already a ton of books and information floating on the web in regards to algorithms and data structures. At the end of the day its up to you.

Yeah, that was going through my mind, I would be including things to make it stand out.

I could pull several books off my shelf that are about data structures and algorithms. Why bother?

OBAMASELF - July 12, 2020, 10:06 pm

Wait what are you trying to do with the DSA PDF? Are you making a note book or something like that?
