Thread: [Gathering WordPress Sites](#)

bob45 - July 11, 2020, 3:01 pm

The only problem I have to deal with is that it takes too long copying urls from Google. Is there a way or script to automate this?

SIM-4777448 - July 11, 2020, 3:17 pm

yes code a custom bot in python which will do this. i have my own, i scan vulnerable wp sitezs store it and upload shell. for buying msg me in convo

amnamdam - July 15, 2020, 1:54 pm

you have the version to crack wordpress contact form 7 ? PM pls

7 - July 15, 2020, 1:57 pm

Yeah loads of ways. Umm find your known vulnerability and search that through Google and output urls to file. I have an automation script at home to dissect and rewrite. Pm me

Try Shodan's CLI.

First, make an account in www.shodan.io and get yourself an API key. Copy that in your clipboard, then

```
Code su root
apt-get update
apt-get install python python-pip
pip install --upgrade pip
pip install shodan
shodan init <API key in your clipboard>
Then fire it up:
Code shodan search "X-Powered-By: Wordpress"
```
