Thread: [\[L33T/UB3R\] FREE Long Lasting FUD Js Obfuscator \(crypt .NET RAT's FUD\)](#)

Et3rnal - July 15, 2020, 5:09 am

If you would like access to <http://javascripobfuscator.com/> "Enterprise" membership 4 months (all features unlocked) you are most welcome to post below and I will get back to you.

This can be used with vSupreme Crypter to turn your .NET RAT's (example Async) into a .js file, then you can obfuscate/crypt it with this tool and gain FUD results. I know it bypasses Windows Defender runtime, but I'm interested to see if any of you scan on a runtime scanner and provide the results.

Remember to tick all the enterprise features.

Printscreen of Javascript Obfuscator <https://prnt.sc/ti89g8>

It sells for \$80/m and has 4 months active and will remain topped up, so you will always have a FUD crypter.

Tip: It's encryption is unique for every build and you can also obfuscate multiple js files at once, meaning you can get 100 unique FUD servers with a click of your mouse. No need for crypters anymore! ??

Check this method on how to crypt: <https://hackforums.net/showthread.php?tid=5920290>
