What Is Port-forwarding?

Port forwarding is necessary for using different tools, Such as RATs and uTorrent and so on. Please follow this guide on How To Port Forward and you'll have your port forwarded Smiling!

Today i'll teach you how to port forward through the router & modem. (Not with PFConfig Smiling) Lets Start!

Start off by going to:

Code Start -> Run -> CMD -> And Type IPCONFIG

Now Copy That "Standard Gateway // Default Gateway" IP And Type It Into Your Webbrowser & Log in.

My username is Root - nothing. The router // modem accounts usually are these:

Admin - Admin

Admin - Password

Admin - User

Admin - Root

Admin - Custom Password, Check underneath your router for it! Awink

Root - Admin

Root -

Root - Password

Root - Root

Root - Password

Root - Custom Password. Check underneath Awink

User - Root

User -

User - Admin

User - Password

User - User

User - Custom Pass.

And so on.

Once you're logged in, Go to the "port forwarding" or in this case, "Virtual Server"

Virtual Server: Enable / Disable.

Local IP: Found In IPConfig, As IP Address.

Start Port: The Port You Want To Forward, Start Port.

End Port: The Port You Want To Forward, End Port.

Protocol: TCP & UDP or BOTH

Remark: The Name Of The Wished Forwarded Program.

And When You've Saved The Settings, Go To Canyouseeme.org And Type Your Port In There,
And If It Says

Then You've Succeeded Your Port Forwarding.

If It Says
