Thread: [Facelt/ESEA Cheat](#)

Vizi0nZ - July 16, 2020, 4:56 pm

Any reputable people willing to sell me a web radar? I got in contact with a lot of different people but most of them are sketchy or don't have available slots. Funds aren't an issue, but I'm struggling to find anyone trust worthy to buy from. Thanks

PingersAndMash - July 16, 2020, 6:48 pm

Hey, I know you are a new user but you will not find a Esea or face it cheat and if you do you will be scammed or banned 100% garenteed, forget what 12 year olds tell you on reddit.

YRN_ - July 16, 2020, 10:53 pm

use search bar. say your price range not "money is no issue" when some people wont pay more that \$200/month on hake. Experience on esea/faceit if any. Not that many people are selling on hf that im aware of most are just memes but if you do have big price range upwards to 50k shouldn't be an issue. But my advice would be to get fp1c or rank g/rank S or like adv/mdl then start to look but who knows.

Vizi0nZ - July 17, 2020, 12:17 am

Thanks for not completely shitting on me, I appreciate it.
I'm currently A on ESEA and lv10 Facelt.

Willing to spend up to \$10k upfront, and/or up to \$1000/month. I'm only interested in buying from reputable people or those willing to do a live demo of it working on leagues for me.

Why would I get banned? (Sorry not too familiar with the rules here.)

Is it rule breaking for me to ask for cheats here?

Not breaking the rules but you'll be banned on the league's. Don't trust the guy who gave his discord. He's not reputable for shit.

You're not gonna find anything, just don't bother

Care with the demos. Esea/Faceit won't insta ban so whoever can run any bs cheat and claim its ud and show it. Then weeks later you are banned. Dont buy from anyone who cant prove their reputation (aka randoms giving you discord)

watthefux - July 17, 2020, 2:52 pm

Imagine wasting 1k/month just to get banned omegalul

Might as well buy penny stocks with that 1k, at least they could give you some worthwhile return, if you get lucky.

You should really prove your worth then instead of having a nn account like everyone else who comments on these types of threads. I really couldn't care less if OP gets scammed but at this point all the new accounts claiming they got something is just fu. Post proof.

I'm not going to post my personal nor customer accounts on a publicly available forum, but feel free to add me and I'd love to show you some proof, because yes, i do have a no name account, but that doesn't take away my knowledge on how to bypass these anticheats.

C00000000000000N - July 18, 2020, 3:04 am

There are countless threads all over the internet with people asking for league cheats.

Unless you're well known in the scene, a semi-pro with a promising career or insanely lucky you won't find anyone selling you the type of cheat you're looking for.

The amount of money you're willing to spend is irrelevant, you're going to get scammed 100%

I'm using kmcpp cheat, have been for 3 weeks now.

No bans and in level 8 now, from 4-8 in 2 days actually.

Ye might seem not legit or anything but I guess then risk was worth the reward

Vizi0nZ - July 20, 2020, 9:20 am

Hi guys, I recently bought from kmcpp. Still waiting for my product, but I'll update the thread as
things progress. :)

You guys can use me as the test to see if it's legit or not. When I added him on discord he informed
me a lot of how he does it, and some of his past work. He also brought me a couple people that
could vouch for him on discord.

However, sometimes he takes a long time to respond which kind of hurts knowing I paid upfront in
btc, but I'll still trust him and hope for the best. I took the risk for everyone else interested and you
can trust I'll post back here again.

manobradigital - July 20, 2020, 10:46 am

Thank you OP, please keep us updated, I would love to see some coder that is able to sell semi
private cheats to faceit and esea that really know how to get around these ACs, unfortunately what I
see are developers who can stay UD for a few weeks.

Currently my confidence is for DMA-based cheats, with a little research and some knowledge in
development you can keep 99.9990% UD against faceit and esea, using only visuals, in the matter
of aimbot a little more knowledge is needed, here has a nice video of a good job:

Imagine thinking kmcpp cheat is undetected when you get banned he's going to tell you it's a manual ban so fucking stupid.

Does the cheat just open just like a normal cheat or boot on startup? Or is there some type exploit / trick you do

Let me guess close the faceit client and steam open the cheat remove USB open faceit and csgo lololol.

When cheat on faceit you're playing people without cheats who have alot more knowledge and skill then you, then what do you do put the fov up? what's the point you're team makes will ask you why are you looking at the ground

I'd say I'm fairly decent on client already, I've reached A on ESEA and lv10 Facelt. I'm just bored with the game at this point, and I'm only asking for a web radar since I'm confident in my aim. Appreciate the input though. If I get banned I'll just quit cs and focus on the rest of my life _(?)_

manobradigital - July 22, 2020, 2:12 pm

It is good to see that, in this forum, the majority of users tried to alert the OP that he could be mistaken, unfortunately the OP believed and was deceived.

Because of such misleading people, it is increasingly difficult for someone new to the cheating scene to gain any notoriety, because people will always be afraid to buy something from someone with little reputation.

this user will probably create another account and try
lie to other people, I hope that at some point you are wrong for stealing other people.

Vizi0nZ - July 22, 2020, 3:36 pm

Update:

Didn't receive the radar yet because he wants to update it so I don't get banned considering he recently got banned on faceit.

Also, as I mentioned before, I've lost most interest in the game, and I make a fair amount of money from my software engineering job(web development). I didn't spend too much to where I still think it was worth trying, and if I receive a working product, that's great. If I get banned, I'll quit the game and focus on the rest of my life.

With that said, also as mentioned, I appreciate all the input and warnings everyone gave me. Thank you to those of you who stayed professional in the thread.

<https://shop.lambdaconcept.com/home/43-screamer-m2.html>

companies like this produce cheap hotswappable DMA cards, now they even come in m.2.

hey, they even sell this, which can "REMUX" your mouse input and aimbot with external hardware without getting banned, because it can send usb signals with perfect timing, unlike the last generation of people who used arduino aimbots or whatever.

they even have half of the software necessary on their github.

<https://shop.lambdaconcept.com/home/35-usb2-sniffer.html>

its time to stop pretending that its difficult to cheat on ESEA, or especially faceit. So many people do. They aren't even smart people. They usually aren't even good at cheating. Its just fail all around.

But this game is shit, people like subroza, cj-da-k1ng and flusha can play. Even if you get beyond, without a doubt, busted, by someone like ko1n.

Now, can competitive shooters move to PS4/PS5? just enable mouse support and 144hz output. Please.

Obviously, you think these people are purchasing EV certs for each one of their customers? They're
using vulnerable drivers that 50 people are using at once, ez ban.

Which providers or devs

ahemokay - September 10, 2020, 6:07 pm

Just buy a cert for like \$60 sign your driver and use it literally forever, they won't bother dumping
and analyzing anything as long you dont play the tournaments with price money or are on top the
premium ladder. NP for ESEA/FACEIT/EAC/BE/Vanguard bypass.

What? Any OV cert will do, just disable secure boot. To even get your own EV cert you need to go through the process of registering a LLC which will cost a few hundred bucks as well and might not be easy depending on your country.

How they wanna "see" it retard? They won't give a fuck about every "shady" certificate and manually analyze all of binaries signed with them. Your "personal experience" was just you being a retard and not fixing mousedx and dy probably or trying to use mouse input lmao.
