Thread: [Get Maximum Internet Speed](#)

InternetProxy - July 18, 2020, 7:08 am

This tutorial will show you how to get maximum internet speed.

First,

- 1.Open your Network and Sharing center.
- 2.Click on Local Connection.
- 3.Click on Properties.
- 4.Then Double click Internet Protocol Version 4.
- 5.Change Obtain DNS Server Automatically to Use Following DNS Server.
- 6.Type in Preferred DNS Server = 208.67.222.222
- 7.Type in Alternate DNS Server = 208.67.220.220
- 8.Click OK, then OK, then Close everything until Desktop Appears.
- 9.Restart your PC/Laptop and see the difference.

Then,

1. Go To Run
2. Type system.ini
3. Copy and Paste (Delete Everything)

page buffer=100kbps load=100kbps
Download=100kbps save=100kbps
back=100kb

4. Then Save

Run notepad as administrator

Going forward

I Would Recommend Installing the following softwares:

- 1.)If Your using wifi then use TCP OPTIMIZER Smiling
- 2.)You Can even use Getfullspeed If u think it works.../
- 3.) Use IDM...im damn sure u guys would use it Abiggrin
- 4.) Use RAMRUSH its a pretty cool software which optimizes ur ram and interent speed Abiggrin
- 5.) Last but not the least download AUTOBAHN ...its a small software that runs in the background...and reduces time to buffer video and internet speed
